[User Manual](#)

**OPERA** may be used very quickly via its **GUI** facilitating context elaboration and results exploitation. No code knowledge is necessary. It is also possible to use it in batch mode via a shell and especially on grid computers with no display properties. On the other hand, it is also possible to use it via its **Java** interface inside a higher level tool.

So, two jar files are available:

- **opera-NN.n-jar-with-dependencies.jar** : executable jar including all needed libraries => it is the file to use for **GUI** utilization but it may also be used for the **Java** interface
- **opera-NN.n.jar** : includes only **OPERA** classes => to be used for **Java** interface, under the condition of linking with the right version of called libraries as [GENOPUS](#) or [PATRIUS](#) (see [Dependencies](#) page)

## The GUI mode

- [Overall presentation](#): basic properties
- [Operaapp configuration file](#): description of the configuration file
- [Configuration panel](#): which kind of computtaion to use and Norad Ids selection
- [Solar activity panel](#): which solar activity to take into account
- [Parameters panel](#): changing by default computtition parameters
- [Console panel](#): synthetic results display
- [Result files](#): description of the **xlsx/csv** output files (since V7.2.2).
- [Plots panel](#): description of available plots (since V7.2.2)

## The Batch mode

- [How to call it](#)

## Java Interface

- [Basic principle](#): how to initialize **OPERA**
- [Reentry or S/M Estimation](#): how to compute a reentry and/or S/M estimation
- [Maneuvers Estimation and Pdf report](#): how to build a Pdf report
- [Searching Norad Ids](#): how to filter Norad Ids
- [Tutorials](#): full code examples
